

An excellent source of up-to-date information

Acute Topics in Sport Nutrition

Editor
Manfred Lamprecht

In high-performance sport an optimal diet and nutritional interventions can make the difference between victory and defeat. In recent years, sport nutrition research has increased. This publication provides scientifically-based information with regard to the bioefficacy of trendy sport supplements and dietary approaches off the mainstream. International experts in the specific fields inform and clarify under which circumstances the application of certain supplements and nutritional interventions would be beneficial, either for the performance or health of the athletes. A broad spectrum of recent topics in sport nutrition is provided: selected sport supplements off the mainstream, nutritional interventions and athlete's health, hydration and fluid balance and current aspects in exercise and exercise recovery. Finally, the publication concludes with recent information about the risk of supplementation and inadvertent doping.

The book will be of benefit to sport physicians and scientists, nutritionists, coaches and athletes, as well as to the sport nutrition trade and related industries.

The Book Series

Medicine and Sport Science

Series Editors: **Borms, J.** (Brussels); **Hebbelinck, M.** (Brussels);

Hills, A.P. (Brisbane); **Noakes, T.** (Cape Town)

ISSN 0254-5020, e-ISSN 1662-2812

This series was inaugurated at a time when the sports sciences were separated from medicine. From the first volume on, the editors have united these two areas in order to bridge the gap between medicine and sport science and to give the scientific community at large, and biomedical researchers in particular, the full benefit of current advances being made in the multifaceted domains of sports medicine. Contributions from biomechanics, biochemistry, morphology, engineering, and from different areas of clinical medicine are incorporated into this innovative series.
